1. ABSTRACT

- University Chatbot is an AI-powered assistant built using Google Gemini Pro, Streamlit, and Python. It provides instant responses to university-related queries such as courses, admissions, deadlines, and more. Integrated with MongoDB and SQLite for data storage, the system aims to improve communication and support between students and institutions through natural language interaction.

2. PROBLEMS IN EXISTING SYSTEM

- Students often face delays in receiving academic information.
- Manual query resolution requires staff time and effort.
- No centralized digital assistant is available for quick support.
- Limited access to support outside working hours.

3. PURPOSE OF THE PROJECT

- To develop a chatbot that simulates a university helpdesk.
- To reduce workload on administrative staff.
- To provide 24/7 support using natural language processing.
- To deliver smart, session-based responses using Gemini API.

4. FUNCTION REQUIREMENTS

- User login/signup functionality.
- Real-time chatbot interaction.
- Session management and chat history.
- Integration with Gemini Pro for responses.
- Data storage in MongoDB and SQLite.

5. SYSTEM MODULES

- **Authentication Module:** Login & Signup
- **Chat Interface:** User input & bot reply
- **Session Handler:** Maintains conversation context
- **Database Layer:** MongoDB (cloud) & SQLite (local)
- **Gemini Integration:** For generating intelligent replies

6. SYSTEM REQUIREMENTS

➤ **Hardware:**

Minimum 4GB RAM, i3 Processor or above

➤ **Software:**

Python 3.x

Streamlit

MongoDB Atlas, SQLite

Web Browser (Chrome/Edge)

➤ **Cloud API:**

Google Gemini Pro

7. FRONT END AND BACK END OF SYSTEM

➤ **Front End:**

Developed in Streamlit

Clean UI with chat interface

➤ **Back End:**

Python for logic handling

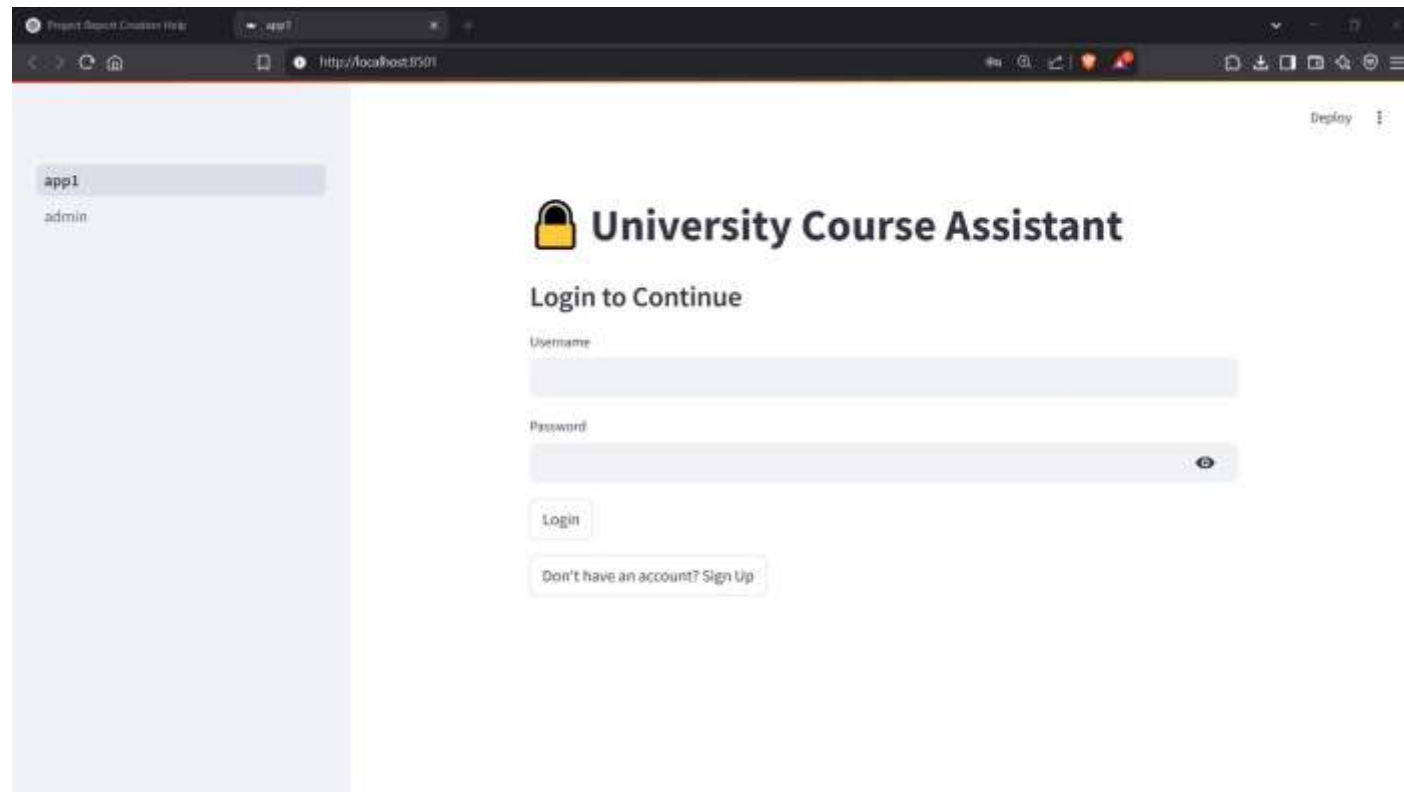

Gemini Pro for AI-based responses

MongoDB/SQLite for data management

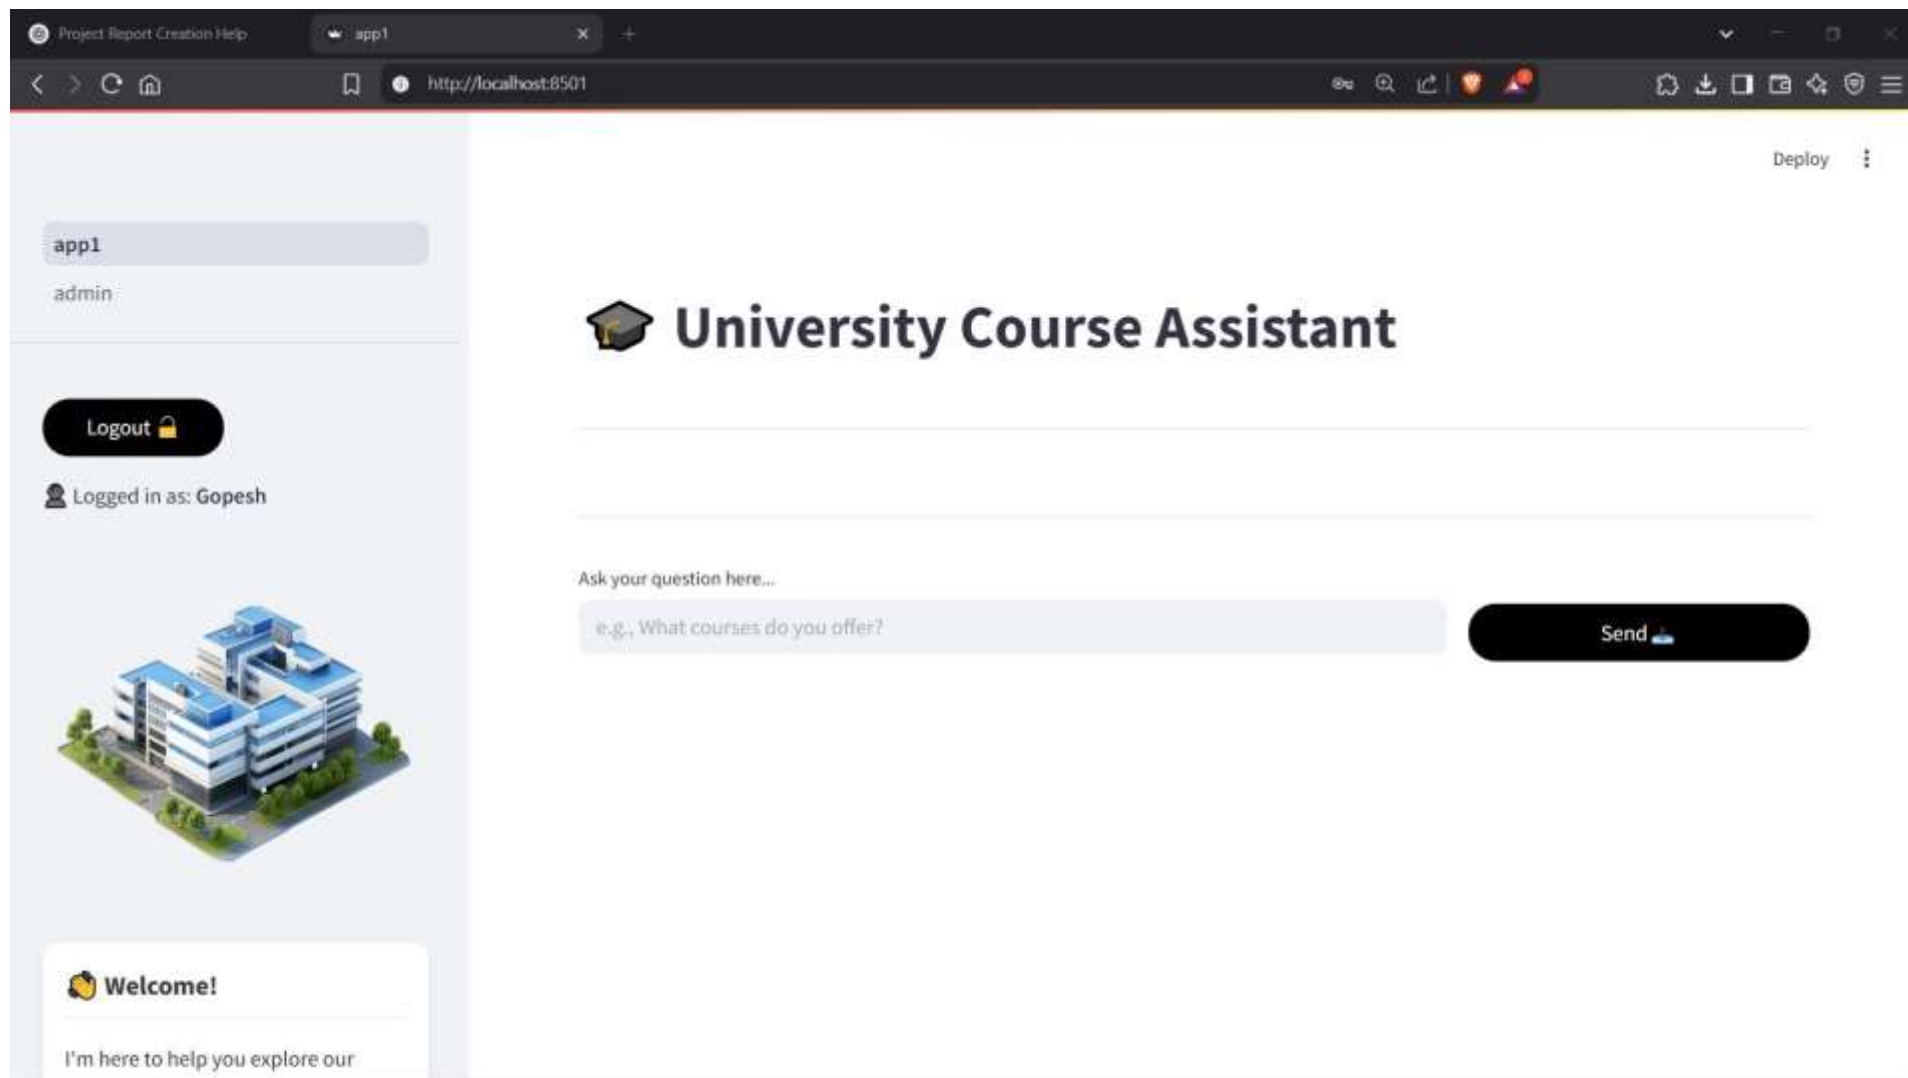

8. DATA DICTIONARY

Field Name	Description	Type
username	Registered user name	String
email	User email ID	String
message	User's question	Text
reply	Chatbot's response	Text
timestamp	Chat time and date	DateTime
session_id	Unique session ID	String

9. SNAPSHOT OF WEBSITE

University Course Assistant

Example Questions

- ◆ Hi! Can you help me with course information?
- ◆ What courses do you offer?
- ◆ Tell me about B.Tech program
- ◆ What is the fee structure for BCA?
- ◆ What subjects are taught in B.Sc first semester?
- ◆ How long is the B.Tech program?
- ◆ What are the subjects in BCA?
- ◆ Tell me about admission process
- ◆ What is the duration of B.Sc?
- ◆ Can you compare B.Tech and BCA programs?

You:
What subjects are taught in B.Sc first semester?

05:03

Assistant:
Hello! 😊
In the first semester of the B.Sc program, you'll be studying these subjects:

- Biology 🦋
- Chemistry 🧪
- Physics 📊
- Mathematics ➕
- Computer Applications 💻

I hope this helps! Let me know if you have any other questions. 👍

Admin Panel – Chat Analysis

The image shows a Visual Studio Code editor window with a dark theme. The Explorer sidebar on the left displays a project named 'UNIVERSITY-CHATBOT' with various files and folders. The file 'app1.py' is selected and open in the main editor. The code in 'app1.py' is a Python script that uses Streamlit for the web interface and Google Generative AI for chatbot functionality. It includes imports for streamlit, google.generativeai, json, os, datetime, pytz, and a database module. A section of the code is commented out, labeled 'User Authentication'. The script defines functions to load and save users from a 'users.json' file. The terminal at the bottom shows the command to activate the virtual environment and run the Streamlit application. The output indicates that the application is running on localhost:8501 and provides a network URL. The status bar at the bottom shows the current file is 'app1.py' at line 224, column 42, using Python 3.11.0 in the 'venv' environment.

How To Run A Server

10. FUTURE ENHANCEMENT

- Add voice-based chat capabilities
- Introduce multilingual support
- Create an admin analytics dashboard
- Integrate with live university data (e.g., timetable, fees)
- Deploy with advanced user authentication
